

* Intro to command line interface (CLI) part 1.

Basic linux commands to execute in command line interface.

- Work with file system.
- create folders
- List files in directory.
- Rename and remove files.
- Display os info.

* GUI vs CLI.

GUI - graphical elements that you can interact with, like buttons.

CLI, terminal.

CLI - user type in commands and see results printed on screen

Terminal - GUI window that you can see on screen. It takes commands and show output.

on the server you have only 'CLI'.
